

SENIOR DOG MEMBERSHIP

Ages 9+

\$239.99

+ HST

As a member, you'll gain access to exclusive membership pricing. These budget-friendly options promote early diagnosis and treatment, helping your dog stay healthy and happy during their golden years.

ANNUAL VACCINE EXAM | **\$0.00** *Reg. \$96.01*

FREE

At your dog's annual exam, they'll receive a nose-to-tail examination to evaluate their overall health. Since dogs age much faster than we do, and are experts at hiding pain, regular examinations are critical for early diagnosis and treatment. Usually, their annual check-up corresponds with their vaccine due dates, which can be performed during this visit. We can also discuss any other concerns you may have at this time.

VACCINATIONS | **\$13.65 Per Vaccine** *Reg. \$27.30*

**SAVE
50%**

Some vaccines are considered essential (and even mandatory) for all dogs, but the exact number of vaccinations recommended for your furry family member will depend on their previous vaccines and lifestyle. On average, if a senior dog has been receiving regular vaccines throughout their adulthood, they'll continue to receive about 2-3 vaccines at each annual visit.

ADDITIONAL EXAMINATIONS | **\$48.00** *Reg. \$96.01*

**SAVE
50%**

Most senior dogs need to visit the veterinarian more frequently in their golden years, whether for routine care, injuries, or other concerns. This membership gives you peace of mind knowing that you can call and book your dog in for a doctor's assessment at any time during the year for half of the regular price.

NAIL TRIMS | **\$11.06** *Reg. \$22.11*

**SAVE
50%**

Long nails are painful for dogs. Untrimmed nails affect the way that they walk and limit them from doing all the activities they love to the fullest. Regular nail trims with lots of love and treats help to form a positive association with the process, and encourages good foot health for your furry family member.

ANAL GLAND EXPRESSIONS | **\$27.99** *Reg. \$55.97*

**SAVE
50%**

Anal glands can easily become plugged and painful as a result of their diet, allergies or stress. When this occurs, it can be necessary to have the fluid drained in order to provide relief and to stop the issue from progressing. For many dogs, this can be a recurring condition that requires regular maintenance.
